### **Commencement of Exploration on Kalahari Copper Belt**

Galileo Resources plc ("**Galileo**" or the "**Company**") is pleased to announce that it has approved start-up of exploration on its' 100% held property in the highly prospective Kalahari Copper Belt ("KCB") in western Botswana.

#### **Highlights**

- Galileo has approved commencement of exploration programs on Kalahari Copper Belt licences PL40/2018 and PL39/2018 aimed at defining targets for initial drill testing
- Exploration will include Heliborne-Electromagnetic (EM) geophysical surveys and a reconnaissance soil sampling survey - techniques which have led to discovery of several major copper-silver deposits in the region
- Galileo licences are interpreted by management to have similar geological settings to Cupric Canyon Capital's Zone 5 and Zone 5N deposits, situated only 25 kilometres due west (which are a subset of a combined sulphide resource of 502Mt @ 1.4% Cu and 17g/t Ag, including 185Mt @ 2.0% Cu and 27g/t Ag)
- PL40/2018 and PL39/2018 also lie along strike of Sandfire Resources' T3 and A4 copper-silver deposits, as well as Cupric's Banana Zone and Eland Zone copper deposits, situated 140km to the southwest

Colin Bird Chairman & CEO said: "*We are pleased to announce the commencement of exploration activities on Kalahari Copper Belt (KCB) tenures PL40/2018 and PL39/2018. Initial exploration will include Heli-EM and soil sampling surveys, which are routine exploration techniques within the KCB and have been responsible for the identification of multiple prospects that have become copper-silver mineral deposits for companies such as Discovery Metals, Cupric Canyon and MOD Resources.*"

#### **Geological Setting and Comparison to Other Projects**

The interpreted geological setting beneath the Kalahari overburden for the area covered by PL40/2018 and PL39/2018 has been interpreted from the regional aeromagnetic and EM data. This area has strong similarities to the synclinal geological setting that hosts Cupric Canyon Capital's ("Cupric") Zone 5 and Zone 5N deposits, situated only 25 kilometres due west. The Zone 5 and Zone 5N deposits are part of the world-class Khoemacau Copper-Silver Project with a combined sulphide resource of 502Mt @ 1.4% Cu and 17g/t Ag, including 185Mt @ 2.0% Cu and 27g/t Ag - refer to Cupric's website [www.khoemacau.com](http://www.khoemacau.com) for details. The Galileo licences also lie 140km along strike from Sandfire Resources' (ASX:SFR) Tshukudu Exploration Project that comprises the T3 Copper-Silver Project (60Mt @ 0.98% Cu & 13.6g/t Ag), where a feasibility study is currently in progress, and the recently discovered high-grade copper A4 Dome Prospect.
